

EuroLite Luminaires

Control of Substances Hazardous to Health Regulations

COSHH 1998

Guide for Users

1. 220 volt mains supply can kill. Fittings must only be installed by competent suitably qualified persons.
2. Always ensure that the fitting is properly seated on the grid system and the appropriate security locking tabs are bent over to lock the fitting in position.
3. Always isolate the power supply before carrying out any installations or maintenance work.
4. All EuroLite fittings use only BS approved electronic components which are Kite marked.
5. Maintenance of the fitting is limited to changing faulty fluorescent tubes, electronic starters and dusting the lighting diffuser. No other site maintenance would normally be anticipated.
6. When using an aluminium diffuser always make sure that the earth strap is properly connected to both the louvre and body of the luminaire.
7. When fitting diffusers always make sure that the correct size is used and that it is properly seated in the grid system.
